

AFAA NEWS

AUBURN FORESTRY ALUMNI ASSOCIATION NEWSLETTER

JANUARY 1991

A MESSAGE FROM YOUR PRESIDENT

WAYNE M. KING ('64)

Your AFAA is moving forward just like our school of forestry and our Tigers. Emmett says all graduates have jobs; our Tigers had a solid season, and in 1990 we have had a 535% increase in Forestry Alumni participation. If you are not part of this progressive movement, please join us so we can have at least one-half (660) of our alumni participating.

Since our spring newsletter many significant events have taken place:

- Our foundation has been meeting regularly and moving forward with their communication and donations programs.
- A full color example of our new logo has been shown to alumni attending our meetings and everyone wants to know where, when and how to receive an emblem. We are working on it ... stay in touch.
- Mike Harris, our Associate Director of Development for the School of Forestry, has resigned and applications are being taken for his replacement. Please look at the annual giving comparison table (page 4) so you can see how much this position has helped our school since 1989.
- Glenn Glover, our Sec/Treas has relinquished this responsibility due to additional responsibilities within the School of Forestry. Charlie Raper has been appointed to take Glenn's place. Charlie enthusiastically pitched in and is doing a great job. *Thanks, Charlie.*
- On September 9, we held AFAA's annual meeting which included a prominent guest speaker along with a wonderful dinner. Dr. Joe Rustia, Auburn's new Vice President for Advancement, enlightened 41 of our members about the situation with the Alumni Association. We are looking forward to working with his organization in the future.
- On August 23, at Alabama's SAF annual meeting in Auburn, we had an alumni breakfast. It was a pleasant surprise to some and was well attended. My thanks to Jim Spears (vice-president) and Emmett for informing those present of what was happening in our alumni association and at the School of Forestry.
- Our SESAFA breakfast came on October 2 at Stone Mountain, Ga. Our thanks to Ginger Kogelschatz (1981) for a successful meeting. We had 19 present and most of those attending had not been able to attend an alumni meeting in quite some time. They were very appreciative for the information Emmett, Charlie and I presented. We have a great deal of support in Georgia and we plan to get them more involved. Among the Georgia-domiciled alumni attending were Mack Barber (1979), Macon; Ginger Borchers Kogelschatz (1981), Atlanta; Ken Simmons (1975), Buckhead; Michael Kelly (1979), Atlanta; Pat Mingo (1990), Warner-Robins.
- Our Homecoming Barbeque was a great success, with about 150 persons attending. We enjoyed meeting other forestry alumni and their families, as well as our School of Forestry staff. Emmett and his staff did a wonderful job and are dedicated to Auburn's School of Forestry.
- Auburn's Outstanding Forestry Alumni award was presented by Jim Spears at Auburn's Forestry Advisory Council banquet on November 12. This year's recipient was Mr. John R. Cook, Jr. (1948), of Andalusia, Alabama. Jim did an excellent job chairing this committee and his help was greatly appreciated.

The Southeast is now America's wood basket and we are part of it. Auburn's School of Forestry will be the prime educator of Foresters who will help keep this wood basket filled from year to year with a great renewable resource. We ask your support and let us hear from you.

JOHN R. COOK, JR. ('48) RECEIVES OUTSTANDING ALUMNUS AWARD

(L to R) Jim Spears ('58), John R. Cook, Jr. ('48), Dean Thompson

John R. Cook, Jr. ('48) is recipient of the 1990 Outstanding Alumnus Award, in recognition of a productive and significant career in industrial forestry. A native of Sumrall, MS, Mr. Cook served in World War II (8th Air Force, England: 35 bombing missions). After receiving his B.S. in Forestry from Auburn in 1948, he started with Hollingsworth and Whitney Paper Company (later Scott Paper) and subsequently held positions of increasing responsibility with Hunt Lumber Company, Tennessee River Pulp and Paper Company, and Dixon Lumber Company. He retired in 1987 as Vice President and General Manager - Woodlands and Solid Wood Products, Packaging Corp. of America. A long-time Rotarian, Mr. Cook was active in numerous forestry organizations and is a member of Auburn's Forestry Advisory Committee. The Cooks live in Andalusia, Alabama.

The Outstanding Alumnus Award was initiated in 1984. Previous recipients are Kenneth D. Bailey ('58); Robert B. Press ('48); Neil A. Van Cleave ('50); Frank M. Stewart, Jr. ('48); Frank E. Jones ('50); and Kenwood C. Nichols ('61).

PRESIDENT BUSH HONORS AUBURN FORESTER & WIFE

Robert N. Gandy (1974) and his wife Jennifer Greer Gandy were honored in April by President Bush for their outstanding work as Peace Corps volunteers.

The couple, who left Birmingham more than two years ago to serve in Costa Rica, were selected to represent the entire Inter-American Region as the 1990 John F. Kennedy Representative Volunteers of the Year. They represent more than 1,500 volunteers currently on assignment in Central and South America.

Gandy served as a forestry extension agent in the Costa Rican village of Hojancha, where he helped farmers learn the value of sound forestry and conservation practices. Gandy was with Resource Management Service, Inc. in Birmingham before serving in the Peace Corps.

Mrs. Gandy, a journalist and author, taught Spanish literacy to adults. "My greatest rewards have been the smiles," she says of her work. "You can only imagine the tremendous smile of a 54 year old woman who writes her name for the first time. The Gandys are presently in Panama.

As we are well into another academic year, I am pleased to have this opportunity to share some of my thoughts with the Alumni. I feel things are very positive with respect to the School of Forestry's development in terms of both recent and planned activities.

The School's enrollment is showing a healthy increase for the third year in a row. Last year, our enrollment increase, on a percentage basis, was the highest in the University. This year, we will be close, if not the highest again. Even with enrollment increases, we are a small School, and this provides the opportunity to emphasize quality education, while producing enough students to satisfy the demand in the state. This Fall we had 110 undergraduates enrolled in the School. An additional 15 are enrolled in the Forest Engineering curriculum in the College of Engineering which we jointly administer. The graduate enrollment is also up, with 30 individuals pursuing masters or doctoral degrees. Our long-term goal is to reach an enrollment of approximately 150 undergraduates and 75 graduate students. At the undergraduate level, we are rapidly approaching this goal. This past Summer, we had 42 students in Summer Camp. A continuing Summer Camp enrollment of 50 students would achieve our undergraduate goal.

To compliment the enrollment picture, employment opportunities for our graduates have been extremely good for the past several years. In fact, I am not sure this is not the best employment situation I have ever seen over a sustained period of time.

Research activity in the School is proceeding at a very fast pace. Elsewhere in this newsletter, there is a notice of the establishment of a Forest Regeneration Center. This is primarily a research activity, but it will also benefit our education, particularly graduate education, and extension programs. During the past year, we have expanded our research into a major commitment in wetlands, which is becoming increasingly important. Our faculty are continuing to be very successful in attracting external funds to supplement state and federal research appropriations. In a period of increasing competition for all types of funding, the School's faculty quality is very evident.

We have also had significant changes in our extension or technology transfer programs. A couple of years ago, we set a major goal to increase our programs in continuing education for foresters, feeling that we should offer at least eight such courses per year. At that time, we were offering only one or two. During the past year, we have either offered, or plan to offer, continuing education programs in the following areas: herbicide technology, pine thinning, aerial photography, hardwood management, small log processing, international trade in forest products, prescribed burning, law for field foresters, timber harvesting, and lumber drying. As you can see, we have exceeded our goals, and plan to increase continuing education offerings even further.

SCHOOL OF FORESTRY DEVELOPMENT

—Remarks by Bill (Bubba) Jones (1978) to the School of Forestry Advisory Council, November, 1990...

Philanthropy is a subject that is often misunderstood especially by foresters, because it challenges all of us who have received benefit from the institution that provided the basic knowledge to provide for our basic welfare to give something back. Philanthropy is not to be confused with profanity, mind you.

Forestry development success at Auburn will depend on the efforts of Forestry alumni and friends of Auburn to combine their collective energy to make up the difference between good Forestry School and a great one. The university budget will provide the basis to continue a good educational and research program for the School of Forestry, but other resources must be tapped to achieve excellence. One of those resources is a planned giving program from alumni.

Currently only eight percent of Auburn forestry graduates participate in giving back to the School of Forestry, or 108 out of over 1300 graduates. The Auburn Forestry Foundation will be involved in development activities that will include Forestry Alumni participation. The Forestry Foundation is operated by a board of directors that you elect and our main function is the management of the Forestry Endowment Fund which currently has cash assets of \$21,500. Our short term goal is to see that fund to grow to \$100,000 so the income that accrues from its assets will be available and

One of the major changes affecting the School is the University's adoption of a new core curriculum for all undergraduates. This core, which was approved by the Board of Trustees earlier this year, is effective for students entering as freshmen Fall Quarter 1991, and consists of 61 credits in English Composition, Literature, World History, Science, Mathematics, Philosophy, Social Sciences, and Fine Arts. However, we do have the option of stepping up the implementation, and the School will essentially adopt the core one year ahead of the target schedule. In modifying our curricula to meet the core, we also took the opportunity to totally review our undergraduate programs. As a result, we have made some rather significant curricula changes, which we feel will strengthen our programs and increase our graduates' competitive position in the job market. We currently offer three undergraduate degrees, Forest Management, Forest Products, and Forest Engineering. The latter is in cooperation with the College of Engineering. We have made changes in all three curricula.

The Forest Management curriculum has been retitled, "Forest Resources". This revised curriculum is more oriented toward multiple-use, and students will be encouraged to obtain a minor in Wildlife. To the extent an undergraduate has clear career objectives, we would expect students who anticipate employment with a public agency, or contemplate graduate work in forest biology, to major in Forest Resources.

The current Forest Products curriculum has been retitled, "Forestry Operations". This curriculum requires most of the current forest management courses, including Summer Camp, with additional courses in timber harvesting and processing. We will encourage all students in this major to obtain a minor in Business. Again, to the extent an undergraduate student can define career objectives, we would expect those with an interest in industrial employment, or graduate work in forest economics, timber harvesting, or forest products, to major in Forestry Operations.

The most changes have been made in the Forest Engineering curriculum. Accommodating the new core, as well as the requirements for both engineering and forestry accreditation proved too much of a challenge within a four year program. We have designed a four year program which meets the core requirements and engineering accreditation. Students will then have the option of obtaining a minor in Forest Resources, which will essentially add a quarter to their degree program, but also meet the requirements for forestry accreditation.

As mentioned earlier, we are excited about the opportunities facing the School's faculty and students, and we appreciate the support and encouragement we have received from our Alumni. Anytime we can provide information on our programs or be of assistance, please contact us.

useful to the Dean of the Forestry School. The Forestry Endowment fund growth is a main objective of the AU Forestry Foundation. There are other gifts that are needed other than a well planned annual cash fund raising, that include real property, land in investments.

The School of Forestry is also involved in development by receiving funds from the Auburn Annual giving program and through specified gifts. So you see there are many ways to give to Auburn Forestry with the AU Forestry Foundation Endowment fund being one of them. Unfortunately we have a long way to go in getting Alumni activated in School of Forestry development. However the AU Forestry Foundation does have a plan where we will be recruiting volunteers to contact our 1300 Alumni to participate at some level. The important thing to remember is that all gifts are important whether they be \$1 or \$1000, and that annual participation will insure success. Dr. Thompson indicated at the Foundation Board meeting that soon a forestry constituent fund raiser will be working for the Alumni office. Your Foundation will certainly make use of his efforts in seeing that our goals are achieved. Charles Raper is the faculty advisor that assists your foundation board in securing gifts and helping us achieve our goals. I hope that when you are contacted about joining this effort you will help Auburn School of Forestry achieve excellence.

SCHOOL OF FORESTRY
AUBURN UNIVERSITY
ALUMNI DATASHEET

NAME: _____ Year(s) graduated: _____

Circle appropriate degree(s): Forest Management, Forest Products, Forest Engineering
Masters -- Major Professor: _____

Ph.D -- Major Professor: _____

Home Address: _____ Telephone Number: _____

_____ () _____

Business Address: _____ Telephone Number: _____

_____ () _____

Responsibilities: (Please check appropriate blanks)

- ___ Land management
- ___ Raw material supply/procurement
- ___ Personnel management
- ___ Processing plant management
- ___ Education
- ___ Consulting
- ___ Other, explain _____

How often do you attend Auburn Forestry Alumni Association functions?

Regularly Occasionally Never

State _____ _____ _____

Regional _____ _____ _____

National _____ _____ _____

How often do you visit the Auburn University campus? (Please circle)

- Once or more per week Once or more per month
- Once or more per year Once or more every five years
- Once or more every ten years I have not visited since graduation

What activities, functions or issues would you like to see your Alumni Association sponsor or address?

Professional memberships, offices, activities (SAF, AFA, etc.):

In what hobbies or leisure activities are you involved:

Other activities (church, scouts, etc.):

Other comments or information:

Do you mind if this information is included in an Alumni Directory? YES NO

Auburn Forestry Alumni and Friends:

I wish to thank each and every one of you for the support given to me and the Directors of Auburn Forestry Foundation during the past two years.

Though all of our goals were not reached there has been a good foundation laid upon which to build a greater Auburn Forestry Foundation and thereby a greater School of Forestry at Auburn. Continued support is needed for the Foundation to accomplish the goals set.

We have divided the state into districts, with a coordinator for each district. Some of you have volunteered to serve. Your support will be needed to assist these district coordinators, contact friends and alumni of Forestry in each District. Your local contact with landowners who may wish to donate cash or property to the Auburn Forestry Foundation would be helpful.

The Foundation is not forgetting those who reside outside the State of Alabama; you also will have someone to contact and coordinate with for activities within your state of residence.

If you need any additional information about the Foundation please call me collect (205)967-2545 and I will be glad to help obtain the information that will answer your question.

Join and support the Auburn Forestry Alumni Association and donate to the Auburn Forestry Foundation (your foundation) for a greater School of Forestry at Auburn.

Again Thank you for your support.

Gene Sample (54)
Outgoing President
Auburn Forestry Foundation
1990 - 1990

Charles Tarver (68) has been elected President of the American Forestry Association, Washington, D.C. Mr. Tarver is founder and Chief Executive Officer of Forest Investment Associates, Atlanta, GA. This firm, founded in 1986, provides timberland investment services for institutional investors in five southern states.

The American Forestry Association, founded in 1875, is a nationwide association representing citizen interests in U.S. forest policy.

AUBURN FORESTRY ALUMNI ASSOCIATION NEWS

The Auburn Forestry Foundation is a sub-entity of the Auburn University Foundation. Donations of cash, securities, or property to either Foundation are deductible under the U.S. Internal Revenue Code, and the Tax Code of Alabama.

AUBURN UNIVERSITY NEWS

September 24, 1990: (full text of news release)

AUBURN'S SCHOOL OF FORESTRY ESTABLISHES FOREST REGENERATION CENTER

AUBURN - Auburn University's School of Forestry, already a national leader in research and teaching in the area of renewal of wooded lands, has established the Forest Regeneration Center to allow for concentration of related faculty efforts.

"Forest regeneration is an important stage both economically and environmentally in the life of a forest, and we feel that the scientists we have working in this area represent a real resource for state and regional landowners," said Bromett F. Thompson, dean of the school.

"Concentrating our efforts under the auspices of the center will increase awareness of our regeneration program, allow us to improve our capabilities and give us an edge in attracting extramural funding. As our reputation grows, so will the quality of our graduate programs and our undergraduate teaching efforts."

According to Thompson, 18 of the approximately 40 forestry faculty members are involved in teaching and/or research related to forest regeneration. He also noted that the past three years have seen AU forest biology scientists obtain an average of \$120,000 per year in grant funds - among the highest at Auburn.

Dean Gjerstad, on Auburn's faculty since 1973, has been named the center's director. Gjerstad, a tree physiologist who holds the Ph.D. from Iowa State University, formerly directed Auburn's Southern Forest Nursery Management Cooperative as well as AU's silvicultural Herbicide Cooperative.

"Work we focus on, or work we will be focusing on, in large measure considers questions of how to alleviate stresses which make forest regeneration difficult," Gjerstad said.

"Stresses such as pollution, temperature extremes, plant competition, low light levels, nutrient deficiency, diseases and drought hinder regeneration of plants and trees, and we are working on ways to overcome these problems."

Gjerstad said that AU research looks at basic questions of tree biology and physiology, growth response, and at economic benefits associated with forest regeneration.

"In the U.S., our forests provide vital economic and ecological functions," Gjerstad said.

"The most intensive use of our forests occurs in the South, where most of the nation's wood products are grown and where population growth is likely to increase pressures for the use of our forests."

**ALUMNI DUES AND UPDATES
ARE IMPORTANT**

Auburn Forestry Alumni Association operates very efficiently and spends very little money. Your dues mainly cover newsletter expenses, postage, miscellaneous mailing and awards. Along with receiving dues, we also get updated addresses and news. Our dues are only \$5.00 per year and we'd appreciate payment by July 1, 1991.

Also, please complete and return the enclosed Alumni Datasheet. This information is very useful to the school in a number of ways. (Anything that we'd like to publish about you in subsequent newsletters will be expressly cleared with you in advance!)

PLEASE SEND TO:

Charles F. Raper
